Professional Services Engineer

We're in search of a **Professional Services Engineer** to join our client's team in **Boulder, Colorado**. This position is responsible for two primary functions: performing remote and on-site installation and configuration of their technology, and developing device support. Device support includes researching, understanding, and developing rules to process and report on event log data.

Candidates must have proven experience implementing distributed software-based products. They will also need experience in a variety of technologies including networking devices, security devices, operating systems, and databases.

Our client is a growth stage enterprise data security and compliance firm. Headquartered in Boulder Colorado, this company has garnered numerous industry product awards and is continuing to add staff to keep pace with the strong market demand for their products. If you would like to work for an innovative, achievement-oriented product company, click on the link below to send us your resume and apply for the position. Make sure to include a note telling us why you're the perfect person for the job.
